Create a task without token

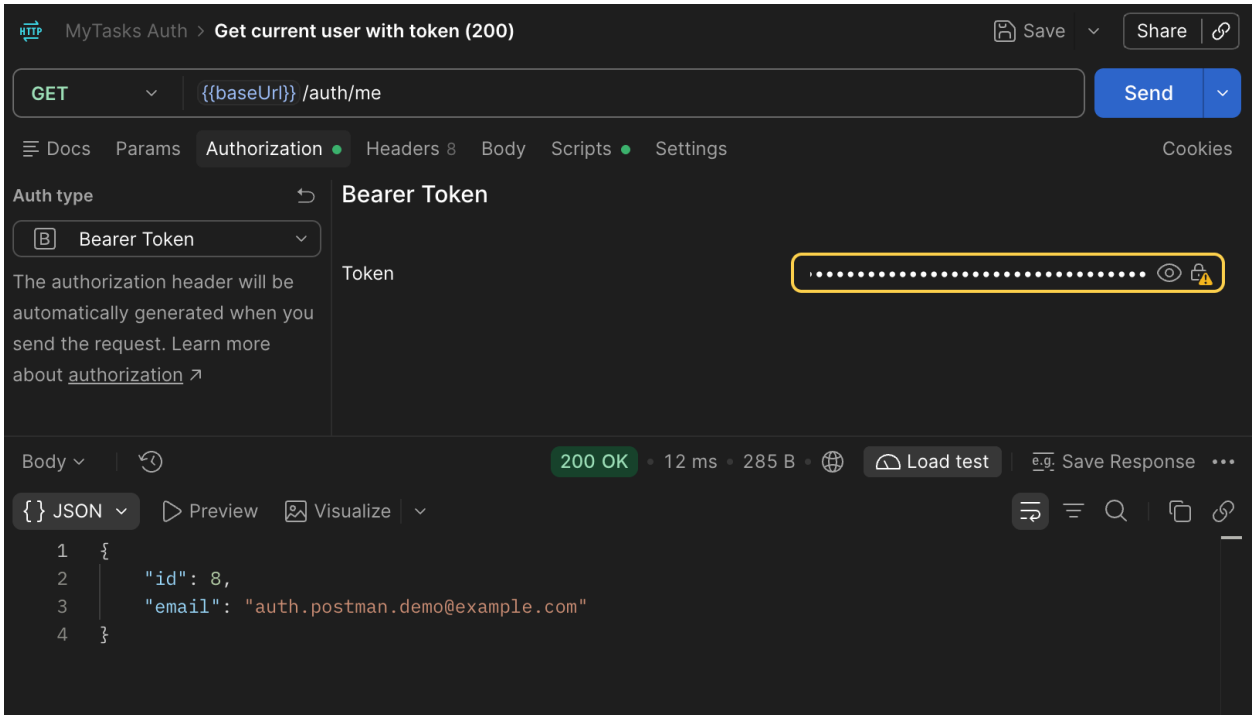

Create a task with token

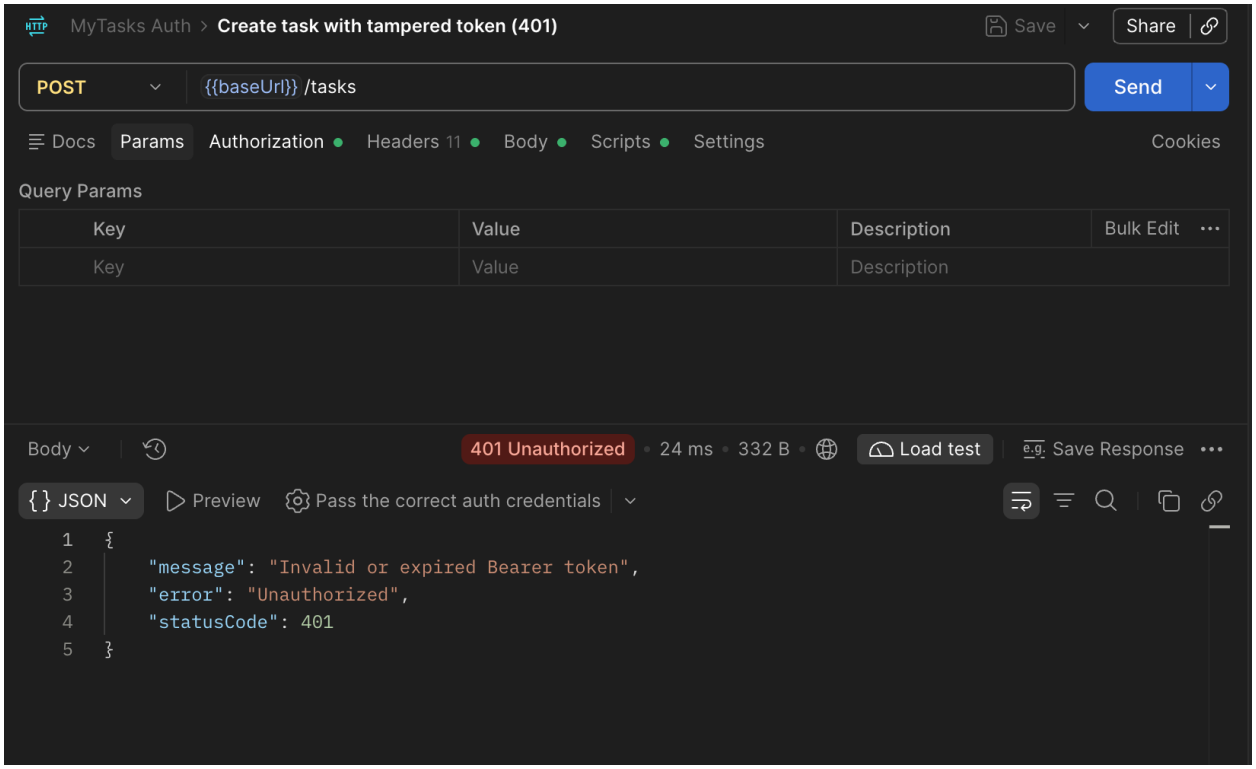

List tasks without token (200)

Get current user with token (200)

Create task with tampered token (401)

two sentences explaining 401 vs 403:

- 401 Unauthorized: The API returns 401 when authentication is missing, invalid, expired, or tampered with, indicating that the client's identity has not been verified.
- 403 Forbidden: The API returns 403 when the client is authenticated and known, but lacks permission or authorization to access that specific resource.
